APCPDCL is considering PTR LV's in 220/132/33KV substations as Transco-Discom boundary points. Discom Input will be arrived through MRI data collected at Transco-Discom boundary points. MRI data directly gives the Gross discom draws after deducting export energy from the import energy duly considering the MF value. Hence export energy is shown as "0" at T-D boundary points. However OA sales, Auxiliary consumption are shown as export energy for arriving net discom energy draws. There are no franchise sales within the discom. Hence sales under part-B are shown as '0'. However energy sold at outside the periphery through exchanges are mentioned under part-A. Data was presented as per the above lines in the revised report.
