Collection efficiency is computed based on collected amount from HT & LT consumers against billed amount of HT & LT consumers at division level as per billing cycle where as T&D loss of feeders are calculated based on received energy of feeders level, consumption of HT consumers and net energy exports from the feeders based on calendar months in which consumption of LT consumers, which is significant, are not taken in account. There is no direct correlation between T&D loss of feeders and collection efficiency at division level hence computation of AT&C loss at feeders' level is not feasible. It is pertinent to note that Hon'ble commission also mandated the T&D and collection efficiency at division level.
