## ANNEXES

- Annexure 1: Basic details and energy utilization pattern of M/s NIM Industrial Corporation
- Annexure 2: Induction furnace capacity and heating cycle time calculation
- Annexure 3: Energy saving calculation for Induction furnace
- Annexure 4: Energy saving calculation for SPM machines – Turning Operation
- Annexure 5: Energy saving calculation for SPM facing machine
- Annexure 6: Photographs of the unit

## About The Project

---

The project BEE's National Program on "Energy Efficiency and Technology Up gradation in SMEs - Ludhiana Forging Cluster" supported by Bureau of Energy Efficiency (BEE), Ministry of MSME and Ludhiana Auto Parts Manufacturers Association aims to bring down the energy demand of forging industries located at Ludhiana by supporting them to implement Energy Efficient Technologies in the SME units.

# Executive Summary

## 1. Unit Details

Unit Name	:	<b>NIM Industrial Corporation</b>
Address	:	1 <sup>st</sup> Lane, Partap Chowk, Near Sangeet Cinema, Ludhiana - 141003
Contact Person	:	Mr. Ketan Mehajan (Cell no: 9915000741)
Products	:	Nuts, Bolts & Screws, Wheel Studs With Nut
Production		2.5 tons per day
DIC Number		0300912/01578 (Part-II)
Bank Details		State Bank of India, Branch : Miller Ganj, Ludhiana, Account Number: 10330882764
TIN / PAN No.	:	PAN: ACDPM6432B
Contract demand		NA

## 2. Existing Major Energy Consuming Technology

### FO Based re-heating technology

- ▶ Conventional Technology with higher losses
- ▶ Prevailing energy consumption is 0.12 liters of FO per kg of the production

### Lathes Machine

- ▶ Manually operated lathe machines for machining job work including threading, turning, grinding, drilling etc.
- ▶ Electrical motor rating of 3 HP with production of 60- 70 pieces per hour per set of lathe machine.

## 3. Proposed Energy Saving Technologies with Cost Economics

### Proposed Energy Saving Measures

- ▶ Replacement of FO fired re-heating furnace with 50 kW induction re-heating furnace
- ▶ Replacement of manual lathe machines by two numbers of CNC based Special Purpose Machine (SPM), one each for turning and facing operation

Table 1: *Cost Economic Analysis*

Technology	Estimated Energy Savings (%)	Savings	Investment	Simple Payback period (Years)
Induction re-heating furnace (50 kW)	70	912,500	936,510	1.03
SPM - Turning Machine	83	268,560	550,000	2.0
SPM - Facing Machine	85	293,350	550,000	1.9
<b>Total</b>		<b>1,474,410</b>	<b>2,036,510</b>	

## Introduction

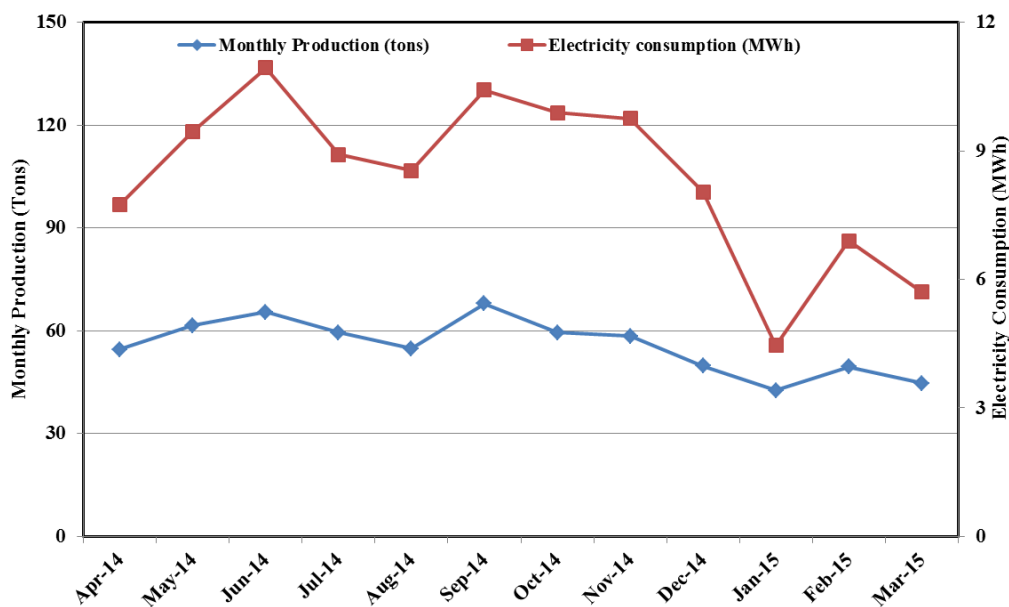

### 1.1 ABOUT THE UNIT

M/s NIM Industrial Corporation is engaged in manufacturing of different types of nuts, bolts, and auto parts in various sizes as per the customer requirement. The manufacturing unit is located at 1st Lane, Partap Chowk, Sangeet Cinema, Ludhiana - 141001, Punjab.

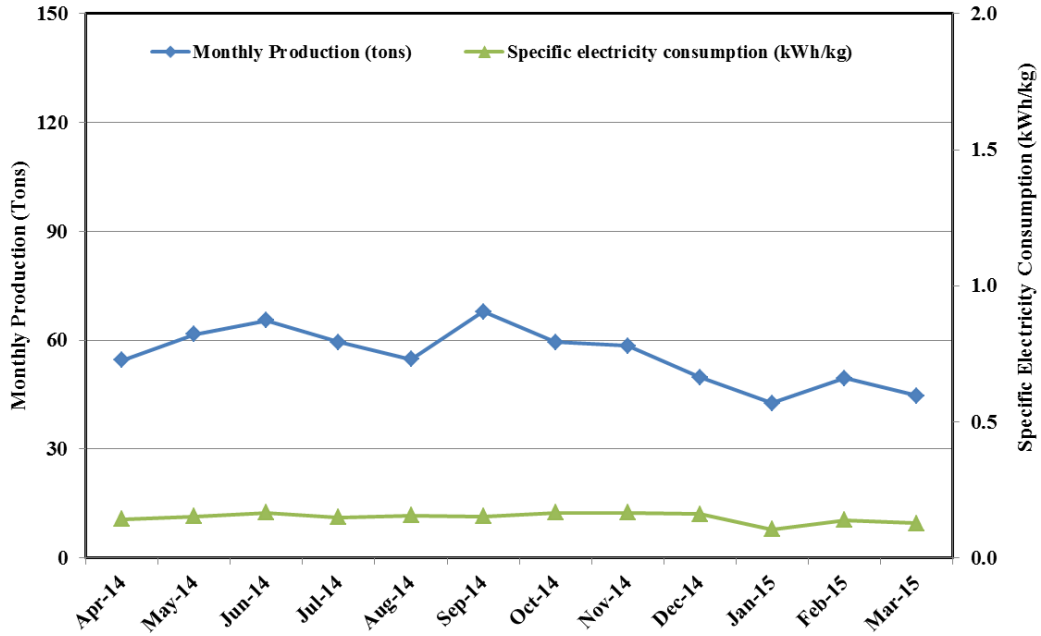

The raw material procured by the unit for making bolts and other auto components include Mild Steel, EN8, EN15 etc.

The daily production lies in the range of 2000– 2200 kgs per day (or 56 tons per month with 25 working days). Nim Industrial Corporation is using primary energy, namely, Furnace Oil (FO) and Electricity supply from SEBs for various process and utility applications in premises. The average monthly FO consumption in the unit is 1342 liters. It was observed that the average monthly electricity consumption is 8398 kWh. Figure 1.1 depicts monthly electricity consumption vis-à-vis total monthly production of the unit for last one year.

To manufacture the products, the unit has installed a FO based re-heating furnace, a forging press, pressing machine, grinding/ facing/ trimming lathes, threading machine etc.

(a) - Monthly variation of production and electricity consumption

(b) – Monthly variation of production and specific electricity consumption

Figure 1.1: *Electricity consumption and production details*

According to the assessment of the energy consumption data collected, the specific thermal energy consumption and specific electrical energy consumption is 0.024 L/kg (245.7 kcal/kg) of product and 0.15 kWh/kg (129.67) of product respectively. The total specific energy consumption (in kCal) is 375.4 kCal/ kg of product. Details of annual electrical and thermal energy consumption and specific energy consumption details in Nim Industrial Corporation is presented in table below:

Table 1.1: *Details of Nim Industrial Corporation*

SN	Parameter	Value	Unit
1	Name and address of unit	M/s NIM Industrial Corporation	
2	Contact person	Mr. Ketan Mahajan	
3	Manufacturing product	Nuts, Bolts and other Auto Parts	
4	Daily Production	56 Tons	
<b>Energy utilization</b>			
6	Average monthly electrical energy consumption	8398	kWh per month
7	Average monthly thermal (FO) energy consumption	1342	Liters per month
8	Average specific thermal energy consumption <sup>1</sup>	0.024	Liter /kg of product
		245.7	kCal/kg of product
9	Specific electrical energy consumption <sup>2</sup>	0.15	kWh/Kg of product
		129.67	kCal/kg of product
10	Specific energy consumption	375.4	kCal/kg of product
11	Electrical energy cost	1.13	Rs/Kg of product
12	Thermal energy cost	1.0	Rs/kg of product
13	Total energy cost	2.09	Rs/kg of product

**Note:**

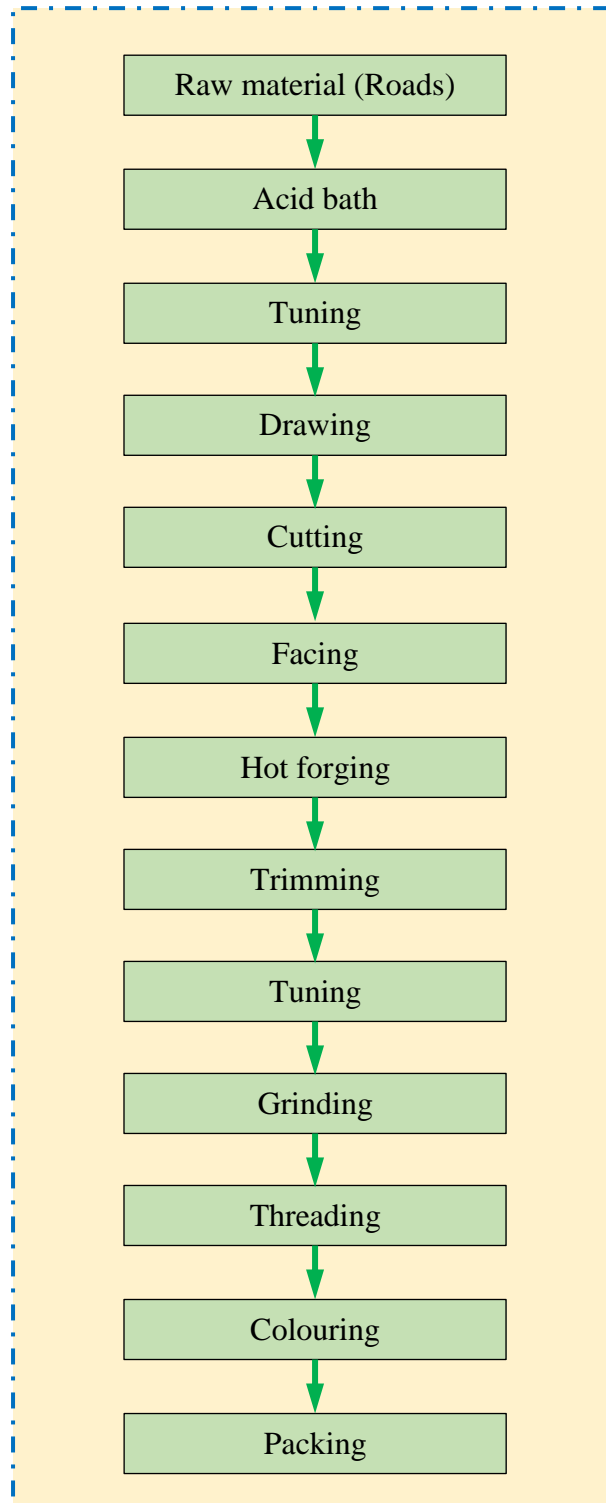

<sup>^</sup>1: Specific gross calorific value of FO is considered as 10,200 kcal / liters

<sup>^</sup>2: Thermal equivalent for one unit of electricity is 860 kCal/kWh.

<sup>^</sup>3: The unit operates for 25 days a month (1 shift of 8 effective hours per day).

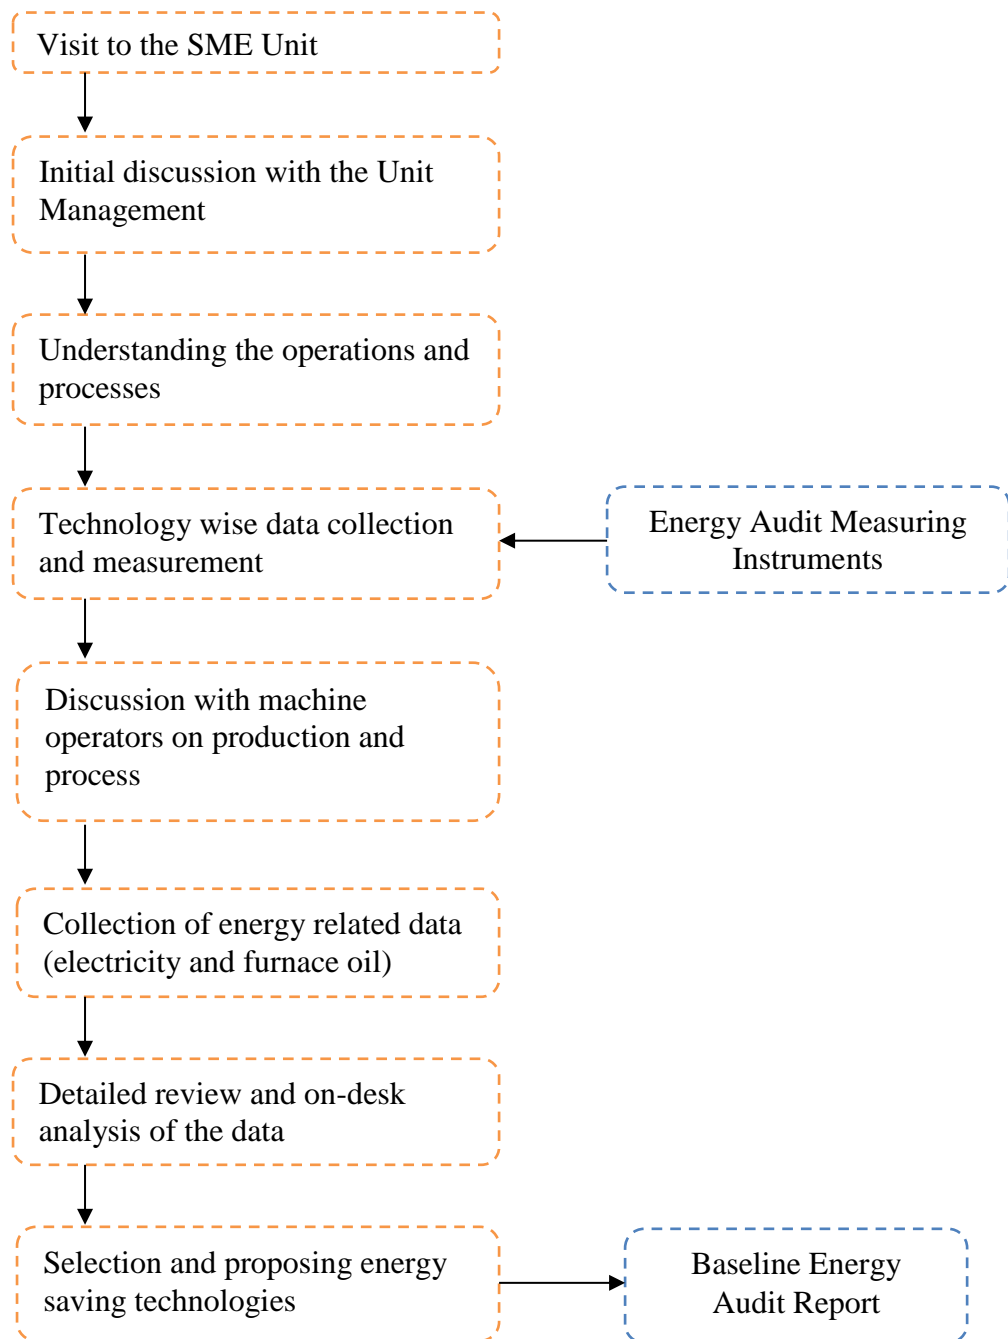

## 1.2 PRODUCTION PROCESS OF PLANT

The following figure shows the typical process employed at manufacturing of forged products at Nim Industrial Corporation are presented below:

### 1.3 ENERGY AUDIT METHODOLOGY

The primary objective of the energy audit was to quantify the existing fuel consumption pattern and to determine the operating efficiencies of existing systems. The key points targeted through energy audits were determination of specific fuel consumption, various losses, operation practices like hot metal temperature, production, fuel consumption, scale formation etc. Pre – planned methodology was followed to conduct the energy audits. Data collected at all above steps was used to calculate various other operating parameters like material feeding rate (Kg/hr), fuel firing rate, specific fuel consumption (kg/tonne), etc.

## Present Process, Observations and Proposed Technology

### 2.1 RE HEATING FURNACE (FURNACE OIL FIRED)

#### 2.1.1 Present Process

Nim Industrial Corporation has installed three furnaces Oil (FO) fired heating furnace to heat the metal pieces for forging process. The metal pieces to be forged are heated to a temperature of 1150 - 1200 deg. C. After that, the heated metal piece is then kept on the forging die having the cavity of the product to be formed. The hot metal piece then forged on the forging press into the product.

#### 2.1.2 Observations

The existing furnace is old having conventional design with manual control option for fuel firing. Since, the efficiency of such furnace is lower, new technology induction furnaces maybe installed for re-heating process. Further, since the flame of the furnace directly hits the surface of the metal during the heating period varying from 20 – 30 minutes deteriorates the atomic/ grain structure of the piece and also leads to the higher scale formation due the oxidation of the metal at high temperature ultimately leading to material/ production loss. In order to attain the exact temperature profile of the material in less time, 3Ts has to be followed, Time, Turbulence and Temperature, if these three parameters can be followed in a right manner proper temperature can be archive in a minimum time, which would help in reducing the excessive heating of the material and reduction in scale loss.

The specific energy consumption of furnace oil was observed to be around 0.12 liters of FO per kg of the production which is higher in comparison to the latest technologies available for carrying out the same purpose. During operation, fuel supply was controlled manually without controlling the air flow rate. Further, there was no provision for measuring the temperature inside the furnace and to what time the material should be heated. The judgement regarding completeness of heating was taken by the operator based on the color of the heated material.

In addition, the existing reheating furnace usage furnace oil as a source of energy to heat the metal pieces. The burning of FO releases harmful gases like CO, CO<sub>2</sub>, SO<sub>x</sub>, NO<sub>x</sub>, smoke etc. During the visit, it was observed that furnace has no exhaust mechanism, ID fan and flue gas

pipe, to pass the flue gases out of the factory. All these factors affect the environment and also the health of the worker handling the furnace and other machineries installed in the factory.

**Conclusion:**

As per the past studies conducted in forging industries, the replacement of the FO fired re-heating furnace with an induction re-heating furnace saves up to 60% of the energy cost. The production rate of the furnace observed during study is observed to be low and varies with the product size (Ref Table 2.1). Therefore, it is proposed to replace both these existing re-heating technology (FO Based) with Energy Efficient Induction Reheating furnaces.

This replacement would provide following benefits:

- Environmental cleaner technology
- Reduces Specific Energy Consumption
- Faster operation and reduced scale formation
- User friendly technology
- Improved quality of the product output
- Higher output with fewer crop cuts or short bars

**2.1.4 Cost Economics Analysis**

The comparison of FO based re-heating technology and induction technology, specific energy consumption, cost savings, investment required and simple payback period of the investment on induction technology is given in Table 2.1. The detailed calculation to finalize the size of induction furnace is provided as **Annexure 3**.

Table 2.1: *Cost Economic Analysis of proposed induction furnace*

Parameter	Unit	Value
Furnace oil consumption on existing re-heating furnace	Liters/hr	7
Production in terms of Kg	Kg/hour	60
Specific energy consumption on FO based re-heating furnace	Liters/Kg	0.12
Cost of energy consumption	Rs./Kg	5.83
Power consumed by proposed induction furnace (rated capacity 50 kW operating at 45 kW)	kW	45
Production in terms of Kg	Kg/hr	110
Specific energy consumption on induction reheating furnace	kWh/Kg	0.41
Cost of energy consumption	Rs./Kg	3.07
Reduction in cost of energy required	Rs./Kg	2.77
Operating hours	Hrs	10
Annual operating days	Days	300
Annual cost savings	Rs	912,500
Investment required for Induction furnace ( 50 kW)	Rs	936,510
Simple payback period	Years	1.03

As per the detailed calculations done, it is proposed to install an induction re-heating furnace of capacity 50 kW for carrying out heating of heavier metal pieces. Based on the discussion with concerned person in the unit, it came out that maximum weight of the

individual piece is around 0.6 kgs. The cycle time required to re-heat the metal piece of 0.6 kgs would be around 20 secs.

The cost of energy saved per Kg of material forged is calculated as Rs. 2.77. The investment required for implementing the induction technology is estimated to about Rs 10 Lakhs with annual saving of Rs 9.12 Lakhs. The simple payback period of the technology is 1.03 years.

## 2.2 SPECIAL PURPOSE MACHINES (SPM)

### 2.2.1 Present Process:

Nim Industrial Corporation has installed manually operated lathe machines for various components machining job work like facing, turning, grinding, drilling etc. These machine runs on electrical motors having the capacity of 3 HP with production/ machining of 60- 70 pcs/hr.

### 2.2.2 Observations

Since these machines are manually operated, the process through which components are manufactured is very slow

and time consuming. Apart from the slow process, the components manufactured are not very precise, identical and of high quality. Some times what happens that the machine keeps on running even there is no component on the machine or the operator is busy in some other work. All these factors lead to the loss of energy and production of low quality components.

### 2.2.3 Conclusion

In order to promote the energy efficiency and reduction in the overall energy cost in the factory, it is recommended to replace the existing manual machines by automatic special purpose machine (SPMs). Since the modified machines will run on the pre-installed programming technique, the consumption of electricity will only happen when there is a function or operation required on the component. In the ideal condition the machine will remain in dead mode/ no operation mode.

Apart from the operation, the machine automatically loads the component for machining. The cycle time of the each component will be fixed in the business logic of

the PLC / SPM machine therefore each component will take specific time for processing or machining. The SPM machines results in 30-50% percent of the energy savings depending upon the type of component, operation, material, cycle time etc.

Benefits of the Automatic SPM/ CNC machines:

- Reduced energy consumption
- Faster operation and reduced down time
- Improved product quality and symmetrical product dimensions
- Higher productivity
- Environment friendly technology

#### 2.2.4 Cost Economics Analysis

The comparison of production on old manual/ conventional lathe machine and modified SPM machine, specific energy consumption, cost savings, investment required and simple payback period of the investment on SPM machines is given in Table 2.2 and Table 2.3.

Table 2.2: *Cost Economic Analysis of proposed induction furnace Proposed SPM for turning operation*

Parameter	Unit	Value
Power consumed by conventional turning machine	kW	8.952
Production on conventional turning machine	Pcs/hr	65
Specific power consumption on conventional machine	kWh/Pcs	0.13772308
Power consumed by SPM turning machine (motor capacity 5HP) @ 80% Loading	kW	2.984
Production on SPM turning machine (Projected)	Pcs/hr	130
Specific power consumption on SPM machine	kWh/Pcs	0.023
Reduction in specific power consumption	kWh/Pcs	0.115
Percentage savings	%	83.3
Operating hours	Hrs	8
Annual operating days	Days	300
Annual electricity savings	kWh	35,808
Annual cost savings	Rs.	268,560
Investment required	Rs.	550,000
Simple payback period	Years	2

As per the detailed calculations done, it is proposed to convert existing manual lathes into automatic Special Purpose Machines (SPMs). The specific power consumption on a manual machine is 0.137 kWh/ pcs whereas the specific power consumption in modified SPM machine would be around 0.023 kWh/pcs resulting in 84% savings in electrical energy. The investment required for making an SPM machine would be around Rs 5.5 Lakhs with annual saving of Rs 2.68 Lakhs. The simple payback period of the technology is 2 years.

Table 2.3: *Cost Economic Analysis of proposed induction furnace proposed SPM for facing operation*

Parameter	Unit	Value
Power consumed by old manual facing machine	kW	8.952
Production on manual facing machine	Pcs/hr	65
Specific power consumption on manual machine	kWh/Pcs	0.138
Power consumed by SPM Machine (motor capacity 5HP) @ 70% Loading	kW	2.984
Production on SPM machine (Projected)	Pcs/hr	140
Specific power consumption on SPM machine	kWh/Pcs	0.021
Reduction in specific power consumption	kWh/Pcs	0.116
Percentage savings	%	84.5
Operating hours	Hrs	8
Annual operating days	Days	300
Annual electricity savings	kWh	39,113
Annual cost savings	Rs.	293,350
Investment required	Rs.	550,000
Simple payback period	Years	1.9

As observed from the Table 2.3, the specific power consumption on a conventional lathe machine is 0.138 kWh/ pcs whereas the specific power consumption in modified SPM machine would be around 0.021 kWh/pcs resulting in 84.5% savings in electrical energy. The investment required for making an SPM machine would be around Rs 5.5 Lakhs with annual saving of Rs 2.93 Lakhs. The simple payback period of the technology is 1.9 years.

## Basic details and energy utilization pattern of M/s NIM Industrial Corporation

SN	Parameter	Value	Unit
1	Name and address of unit	M/s NIM Industrial Corporation	
2	Contact person	Mr. Ketan Mahajan	
3	Manufacturing product	Nuts, Bolts and other Auto Parts	
4	Daily Production	56 Tons	
<b>Energy utilization</b>			
6	Average monthly electrical energy consumption	8398	kWh per month
7	Average monthly thermal (FO) energy consumption	1342	Liters per month
8	Average specific thermal energy consumption <sup>1</sup>	0.024	Liter /kg of product
		245.7	kCal/kg of product
9	Specific electrical energy consumption <sup>2</sup>	0.15	kWh/Kg of product
		129.67	kCal/kg of product
10	Specific energy consumption	375.4	kCal/kg of product
11	Electrical energy cost	1.13	Rs/Kg of product
12	Thermal energy cost	1.0	Rs/kg of product
13	Total energy cost	2.09	Rs/kg of product

**Note:**

<sup>1</sup>: Specific gross calorific value of FO is considered as 10,200 kcal / liters

<sup>2</sup>: Thermal equivalent for one unit of electricity is 860 kCal/kWh.

<sup>3</sup>: The unit operates for 25 days a month.

## Induction furnace capacity and heating cycle time calculation

### **Induction furnace capacity calculations:**

#### Induction furnace design standard: 2.7 – 3 kg/ kW/hr

Hourly material to be heated = 110 Kg

Induction furnace capacity requirement (theoretical) =  $110/2.7$  kW/hr  
= 40.74 kW/hr

As discussed with technology manufacturer, we have taken the lower value 2.7 kg/kW/hr for calculations.

Induction furnace capacity requirement (actual) (efficiency = 90%) =  $40.74$  kW/hr /0.90  
= 45.26 kw/hr  
= 45 kW approximately

### **Heating cycle time calculation:**

Hourly material to be heated = 110 kg  
Weight of the metal pieces = 600 gram  
No. of pieces to be heated in an hour = 183 pieces  
Heating time required per piece = 20 seconds approximately

Keeping in mind the variety of products manufactured by Nim Industrial corporation (India) having variable weight, size, geometry, composition etc. induction furnace of 50 kW is proposed.

### **Note:**

*\*\* For more accurate capacity options, induction furnace manufacturer should be consulted prior to the implementation*

### Energy saving calculation for Induction furnace

Parameter	Unit	Value
Furnace oil consumption on existing re-heating furnace	Liters/hr	7
Production in terms of Kg	Kg/hour	60
Specific energy consumption on FO based re-heating furnace	Liters/Kg	0.12
Cost of energy consumption	Rs./Kg	5.83
Power consumed by proposed induction furnace (rated capacity 50 kW operating at 45 kW)	kW	45
Production in terms of Kg	Kg/hr	110
Specific energy consumption on induction reheating furnace	kWh/Kg	0.41
Cost of energy consumption	Rs./Kg	3.07
Reduction in cost of energy required	Rs./Kg	2.77
Operating hours	Hrs	10
Annual operating days	Days	300
Annual cost savings	Rs	912,500
Investment required for Induction furnace ( 50 kW)	Rs	936,510
Simple payback period	Years	1.03

**Note:**

*\*\* The cost of induction furnace is an indicative value gathered from quotations provided by furnace suppliers. It may vary according to the heating requirement and the material to be heated.*

### Energy saving calculation for SPM machines – Turning Operation

Parameter	Unit	Value
Power consumed by conventional turning machine	kW	8.952
Production on conventional turning machine	Pcs/hr	65
Specific power consumption on conventional machine	kWh/Pcs	0.13772308
Power consumed by SPM turning machine (motor capacity 5HP) @ 80% Loading	kW	2.984
Production on SPM turning machine (Projected)	Pcs/hr	130
Specific power consumption on SPM machine	kWh/Pcs	0.023
Reduction in specific power consumption	kWh/Pcs	0.115
Percentage savings	%	83.3
Operating hours	Hrs	8
Annual operating days	Days	300
Annual electricity savings	kWh	35,808
Annual cost savings	Rs.	268,560
Investment required	Rs.	550,000
Simple payback period	Years	2

**Note:**

*\*\* The cost of SPM machines is an indicative value gathered from discussions with SPM machine suppliers. It may vary from operation to operation and product to product.*

## Annexure 5

### Energy Saving calculation for SPM facing machine

Parameter	Unit	Value
Power consumed by old manual facing machine	kW	8.952
Production on manual facing machine	Pcs/hr	65
Specific power consumption on manual machine	kWh/Pcs	0.138
Power consumed by SPM Machine (motor capacity 5HP) @ 70% Loading	kW	2.984
Production on SPM machine (Projected)	Pcs/hr	140
Specific power consumption on SPM machine	kWh/Pcs	0.021
Reduction in specific power consumption	kWh/Pcs	0.116
Percentage savings	%	84.5
Operating hours	Hrs	8
Annual operating days	Days	300
Annual electricity savings	kWh	39,113
Annual cost savings	Rs.	293,350
Investment required	Rs.	550,000
Simple payback period	Years	1.9

**Note:**

*\*\* The cost of SPM machines is an indicative value gathered from discussions with SPM machine suppliers. It may vary from operation to operation and product to product.*
