

# National Level Interactive Session for Designated Consumers on PAT awareness under NMEEE

## MINUTES OF MEETING 31<sup>ST</sup> JANUARY 2011-MUMBAI

National Level Interactive Session for Designated Consumer on  
PAT under NMEEE, 31<sup>st</sup> January 2011, Mumbai

# CONTENTS

1. *Program Copy*
2. *Sector wise break up of Questions and their replies*
3. *List of Participants as Annexure to each report along with names of DC they represent*
4. *List of the Media Personnel and Media house they represent*
5. *Copies of Advertisement released*
6. *List of Invites sent out*

National Level Interactive Session for Designated Consumer on  
PAT under NMEEE, 31<sup>st</sup> January 2011, Mumbai

**Lighting of the Lamp**

**Press Conference**

**Question & Answer Session**

**National Level PAT Awareness Session, Mumbai**  
**Question and Answer Round**

**FERTILISERS**

By Mr. Narend Sawant  
Deepak Fertilizer

**Question 1** The baseline specific consumption and target specific consumption would have to be achieved is for all 3 year, within 3 year or average of 3 years?

It was to be achieved for the year 2013-2014. X% (what is to be defined) less than the baseline energy defined.

By Mr. P.M.C Nayar  
Rashtriya Chemical & fertilizers Ltd.

**Question 2** How the target fixing will be done?

The fixing of target for every plant is baseline energy consumption is average of 3 year i.e. annual baseline SEC. Every industry will be given a percentage reduction and that has to be achieved from baseline energy consumption.

**Question 3** How to achieve percentage reduction?

The percentage reduction is smallest for most efficient and largest for less efficient plant, it doesn't mean any less efficient plant comes to achieve the baseline or target of the most efficient plant. There will be no sectoral benchmarking; target fixation is different for every plant.

**Question 4** The consistent availability of energy is a constraint, as industry appreciate reduce of gas reduces SEC. How this will be handled? How to recover cost? Any SEC reduction will enter a cost. What is the mechanism/kind of price to be taken as industry has IIR estimated?

If gas is not consistent or power station doesn't have access to coal, they will operate at less than their optimum capacity. If this capacity due to fuel availability is less then there will be adjustment. This adjustment will be handled in the beginning.

Second Adjustment will be for the % of electricity purchased from grid.  
Cost in case of fertilizer is decided by Ministry of Fertilizer that when to develop subsidy and for power is done by regulatory commissions. If there is saving because of lower Energy Consumption, Industry is allowed to retain part of it. This is an on-going discussion with Ministry of Fertilizer and Fertilizer's Association, who will come up with the formula which will also take into account the cost involved.

**Question Since only Urea is considered in the Fertilizer sector, will the energy Consumption for the other products be included for target setting.**

Energy consumed for products other than Urea will be adjusted while calculating SEC.

## CEMENT

By Mr. P. A Nair  
Digvijay Cements, Gujarat

### **Question 5 Is Waste Heat Recovery system excluded from energy saving scheme?**

Nothing has been included or excluded. WHR is not excluded only amount of energy coming in plant or amount of product going out of plant is point of concern under the scheme.

By Ibrahim Khan  
ACC Limited

### **Question 6 We have mother plant in Karnataka, as the capacity increased we have two grinding unit in different state. Will ESCert credit will be given to both mother plant and grinding unit, as both calculating SEC. Will both be benefited or there will be separate accountability for mother and daughter plant?**

If grinding unit is consuming is more than 30,000 Ton of equivalent energy it will not be there, only mother plant is DC. If grinding unit is also DC then two are dealt separately. Internal transfer of ESCerts can be done.

### **Question 7 In our industry different types cements are produced which affects the energy consumption significantly. How this product variation be taken care of?**

Correction factors, ppc to opc, will be given to such product variation while calculating the SEC. BEE is working with NCCBM to develop the empirical relation for this. The correction factor is based on best.

## CHLOR ALKALI

By Mr. Mudit Jain

Alkali Manufacture's Association

**Question 8 Any alkali industry already got converted to ambient energy efficient technologies, so no scope of further reduction. Meetings with alkali association will be taken to handle issues like various products not included list of DC.**

BEE had series of meetings with chlor-Alkali industries association, and will continue to have subsequent meetings with plant head, based on sector and many more.

National Level Interactive Session for Designated Consumer on  
PAT under NMEEE, 31<sup>st</sup> January 2011, Mumbai

## PULP & PAPER

By Mr. M D Sharma  
J K Paper

**Question 9 How raw mix change will be taken into account for target setting, because raw mix keep changing and that will change SEC also?**

If large change is there product mix will be considered. It is to be used as compliance. In the next cycle even lower SEC is to be achieved.

**Question 10 What are the obligations of trading ESCert?**

The trading can be done across the sector. It has to be used for compliance purpose. Thats why Banking will be introduced for the next cycle of PAT.

**Question 11 What if the ESCerts are in excess or there is shortage of certificate in market?**

The adjustment of more or less will come into picture at the end of 1st cycle.

## THERMAL POWER PLANT

**By Shekar Adekar**  
**Tata Power**

**Question 12** Will surplus power be considered?

**Answer** Yes Surplus power will be considered. Regulators will be issuing so it will be merged with the existing.

**By Hari Uchanly**  
**Reliance Industries**

**Question 13** How SEC target will be handled and achieved if there is some expansion in unit capacity?

Suppose today plant produce 10 Ton of product and SEC is 100, we expect the SEC be 95. If production is increased from 10 to 15 SEC energy will be computed on the basis of total production. But the penalty will be on 10 not on 15. It will be on baseline number.

**By Alpesh Patel**  
**Essar Power**

**Question 14** Will BEE support the industries in finance to take energy efficient technologies?

As far as central electricity association is concerned much of work is done. Financing will come up through tariff or separate window PFC, REC etc, cost recovered through tariff or separate lending.

**Question 15** Will multiple fuel capability be taken into account, if industry is using liquid and gaseous fuel and sometimes coal is also used?

Yes, it will be considered. Method of adjust will be applied in case.

**Question 16** There are few plants which are having CPP and contacting to grid to supply access power. DC's are forced to operate the CPP at low PLF. So the specific energy consumption goes up. How to take care of this situation?

The regulatory Commission will issue the order in sync with the mechanics. There will not be two different regulations, so no separate adjustment is required as a lot has already been done. Module for adjustments is being developed to take care of this situation.

National Level Interactive Session for Designated Consumer on  
PAT under NMEEE, 31<sup>st</sup> January 2011, Mumbai

## GENERAL

By Sanvik Banerjee  
HR Johnson

**Question 17 Can ESCerts be used for Kyoto protocol? Energy efficient project have say lean time of 3 year, will ESCerts be provided imposed calculation?**

SEC is based on gate to gate approach. Specific project done that reduces SEC then BEE has no problem if it is qualified for CDM. Rolling cycle is for 3 year. If project takes more than 3 year, then industry can think of speeding the project to complete in 3 year.

By Narendra Manja  
Reliance Infrastructure

**Question 18 Certain plants are already running at Best SEC, achieving percentage target may not be possible.**

In the next cycle even more lower SEC is to be achieved.

**Question 19 Why doesn't administration (BEE) decide the ESCerts price in the market for industry?**

Cheaper certificate from the market can be brought and sell. BEE will not be involved in price marking.

**List of participants**  
**31<sup>st</sup> January 2011, Mumbai**
